

About These Articulate Rise Samples

Self-directed instructional design and e-learning authoring projects

These samples were created independently to build and demonstrate hands-on experience with Articulate Rise 360, instructional design, interaction design, assessment design, SCORM publishing, and LMS testing. All three projects were published as SCORM packages and tested end-to-end in TalentLMS.

01 - Before You Paste It Into AI

Workplace AI microlearning

Audience: Employees using generative AI tools at work.

Goal: Help learners pause before sharing workplace information with AI and make a safer decision using Pause -> Check -> Decide.

Key features: Labelled graphic, process interaction, sorting activity, knowledge checks, scenario-based application.

Design focus: Behaviour-first, intentionally short and decision-based rather than theory-heavy.

Accessibility & QA: Meaningful alt text, text alongside visual cues, responsive preview, UK English consistency, content and assessment alignment.

02 - Running Effective 1:1 Meetings

Interactive management-skills course

Audience: New people managers.

Goal: Build practical judgement and communication skills for more effective 1:1 conversations.

Key features: Scenario-based practice, sorting activity, flashcards, knowledge checks, final assessment.

Design focus: Defined observable manager behaviours first, then aligned scenarios, knowledge checks and assessment to those outcomes.

Accessibility & QA: Alt-text review, content accuracy, source references, stronger learner feedback, assessment refinement.

03 - Decoding DISC

Interactive workplace communication course

Audience: Employees and people managers.

Goal: Help learners recognise communication cues and adapt their approach without reducing colleagues to fixed personality labels.

Key features: Scenario-based practice, labelled graphic, sorting activity, tabs, process interaction, final assessment, downloadable job aid.

Design focus: Reduced theory-heavy content and structured application around Notice -> Hypothesise -> Flex -> Check.

Accessibility & QA: Meaningful alt text, no colour-only communication, key learning retained as text, terminology/source/UK English review.

What These Samples Demonstrate

Instructional design · Articulate Rise 360 development · Workplace learning · Microlearning · Scenario-based learning · Interaction design · Assessment design · Accessibility awareness · Quality assurance · SCORM publishing · TalentLMS testing

Note: These are self-directed portfolio projects rather than client or employer work. They are included to demonstrate current hands-on capability with Rise 360 and LMS/SCORM workflows.
