

Before You Paste It Into AI

Workplace AI microlearning · Articulate Rise 360

Audience: Employees using generative AI tools at work

Challenge: Employees can easily paste personal, confidential or non-public information into AI tools without first considering whether the information—or the tool—is appropriate.

Solution: A short decision-based microlearning that gives learners a practical three-step check: Pause → Check → Decide.

My role: Instructional design · Content development · Interaction design · Articulate Rise 360 development · Visual design · Assessment design

Tools: Articulate Rise 360 · TalentLMS

Key features: Labeled graphic · Knowledge checks · Process interaction · Sorting activity · Scenario-based application

Design decisions: Started with the target workplace behaviour rather than with content. The goal was to help employees pause before sharing workplace information with AI, check what the information contains and whether the tool is approved, and then make a safer decision. Kept the experience intentionally short and scenario-based so learners practise the decision rather than work through broad AI theory. In a real organisational setting, I would also check whether policy clarity, approved-tool access or manager guidance were contributing to the performance gap before relying on training alone.

Accessibility: Added meaningful alt text, used text alongside visual cues, and reviewed the experience in responsive preview.

Quality assurance: Reviewed content accuracy, UK English consistency, interaction feedback and assessment alignment.

Testing: Published as SCORM and tested end-to-end in TalentLMS.

Before You Paste It Into AI

Customer Support Ticket

Received: Today

Order #48291 - Replacement Not Received

Customer: **Olivia Harper**
Email: **olivia.harper@example.com**
Account: **104884**

Olivia says the replacement product has still not arrived. She has asked for a refund and mentioned that she may make a formal complaint if the issue isn't resolved this week.

Internal note

Customer retention team can offer up to £250 compensation without director approval.

Confidential business information

Internal rules, pricing, strategy, contracts or other non-public business information may also be restricted.

Quick check: would you use AI here?

Sort each situation based on what you know. Assume your organisation allows AI for general, non-sensitive tasks, but you haven't checked whether this tool is approved for sensitive or confidential information.

Create a checklist using only
fictional example data

Likely OK

Stop and check first

Step 2

CHECK

Ask two questions:

What's in it?

Personal, confidential, sensitive, internal — or already public?

Where is it going?

Is this AI tool approved by your organisation for that type of information?

> 1 2 3 ✓

Step 3

DECIDE

Choose the safest useful option:

- use an approved tool
- remove information the AI doesn't need
- replace real details with fictional placeholders
- use information already approved for public use
- or complete the task without AI

> 1 2 3 ✓
