TECHNICAL WRITING / PORTFOLIO CASE STUDY

Microsoft Teams

Microphone & Camera Troubleshooting Guide

Employee self-service • Desktop Teams • Windows 11 and macOS

THE BRIEF

Create a practical help guide for employees who cannot use their microphone or camera in Microsoft Teams on Windows 11 or macOS. The document needed to support both operating systems without requiring users to understand technical settings in advance.

AUDIENCE AND TASK DESIGN

The guide begins with quick checks, then moves to device selection in Teams, operating-system permissions, and final verification or IT escalation. Microphone and camera procedures are separate so readers can follow only the path that applies to their problem.

WRITING DECISIONS

I used principles from ASD-STE100 Simplified Technical English to guide my writing and editing decisions. I focused on direct instructions, consistent terminology, clear sentence structure, and one main action per step. I also included expected results so readers could confirm whether each procedure worked.

VISUAL DESIGN

Published interface screenshots support the procedures. A highlight identifies the microphone control; the device-settings figure was cropped to focus attention on relevant options. Captions and source notes distinguish genuine screenshots from original artwork.

REVISION AND QUALITY REVIEW

I reviewed the guide from the user's point of view: Could someone find the right control, understand the next action, and tell whether it worked? That led me to clarify where Teams settings are located, simplify repeated menu labels, improve screenshot cropping, and adjust the page layout so procedures are easier to read.

THE FINISHED GUIDE

The result is a seven-page, illustrated guide that employees can use to work through common microphone and camera problems before contacting IT. It brings the most relevant checks and settings into one place, helping users troubleshoot in a clear, logical order.

WHAT THIS SAMPLE DEMONSTRATES

Task-based information architecture • **Procedural writing** • **UI terminology** • **Screenshot integration** • **Iterative editing**
